Dear Hiring Team,

It is with great pleasure that I submit my candidacy for the Full-Stack Software Engineer role on the AI team with Aircall. I bring over three years of experience delivering full-stack systems with React, Python, AWS, and AI orchestration, plus a Master of Science in Computer Science from Pace University.

At Sperse, I led requirements analysis and translated natural-language intents into safe, validated tool calls across 1000+ endpoints for business-critical customer communication workflows. I owned design, architecture, end-to-end delivery, and deployment of concurrent LangChain/LangGraph services, and improved live-site reliability through Langfuse/LangSmith tracing and evaluation hooks. Those changes reduced latency by 60% and LLM API cost by 50%, while sustaining secure operation at production scale. Earlier at Qualitest, I delivered full-stack IAM features and frontend applications with React, Spring Boot, and AWS for 30+ applications, built a Python/PostgreSQL/Redis storage service spanning S3, Google Cloud Storage, and MinIO, and developed Step Functions workflows to support on-call response to critical system issues and continuous reliability.

My AI research work at Pace AI Lab strengthens that foundation for your preferred LLM development profile. I ran CUDA/PyTorch/LoRA experiments on StyleGAN and Stable Diffusion over an HPC cluster, used vLLM and Hugging Face to test and deploy secure inference services, and led workshops for 50+ students on CUDA, Mojo, LangChain, LangGraph, and LangSmith. That mix of deep implementation and technical communication maps directly to your expectations for high-quality engineering in a fast-moving AI organization.

Aircall's mission to empower professionals to have richer conversations through a cloud-based voice solution strongly resonates with me. I am especially aligned with your focus on Obsess Over Our Customers and Innovate & Iterate, and I would value the opportunity to help advance that mission through reliable, secure AI-powered product delivery. I would love to discuss this role further and can be reached at +1 (945) 304-5781 or khanosaid726@gmail.com.

Sincerely,
Osaid Khan
