EDUCATION

Pace University <i>Master of Science (MS) in Computer Science (GPA - 4.0/4.0)</i>	New York City, NY <i>Jan 2024 - Dec 2025</i>
Dr. A.P.J. Abdul Kalam Technical University <i>Bachelor of Technology (B.Tech) in Computer Science</i>	Noida, India <i>Jul 2016 - Sep 2020</i>

TECHNICAL SKILLS

Languages: Java, JavaScript/TypeScript, Python, Rust, Html/Css
Backend & Frameworks: Spring Boot, React, FastAPI, LangGraph, LangChain, FastMCP, LangSmith, Langfuse
Databases: MongoDB, PostgreSQL, Redis
Cloud & DevOps: AWS (EC2, RDS, S3, Lambda, Step Functions, CloudFormation, API Gateway), Docker, Kubernetes, Git, CI/CD
Others: CloudWatch, CloudFront, Google ADK, OpenAI Agents SDK, LlamaIndex, Claude Code

PROFESSIONAL EXPERIENCE

Software Engineer Sperse	Phoenix, AZ <i>Feb 2026 - Present</i>
- Led full-stack technical design and delivery of a multi-agent CRM platform using Python, LangGraph, and FastAPI, serving 10,000+ users by routing requests across 40+ specialized sub-agents with authentication and authorization enforced via tenant-aware JWT propagation and fine-grained access control - Built a React and TypeScript visual workflow platform (React Flow) letting users create, run, and manage agentic swarms, backed by Temporal for durable, fault-tolerant, resumable execution - Engineered a FastMCP server exposing 160+ backend actions to AI agents with fine-grained authorization, securing multi-tenant CRM workflows across customers with built-in OpenTelemetry monitoring - Built GitHub Actions CI/CD pipelines for AI-agent deployments, running trace-based evals to flag latency, accuracy, and security regressions before shipping code into production - Built LlamaIndex-powered RAG agents using OpenAI embeddings and Pgvector to answer product questions and generate ready-to-run REST API examples	
Software Engineer Qualitest	Noida, India <i>Feb 2021 - Dec 2023</i>
- Designed a cloud-agnostic, distributed Storage Service in Java and Spring Boot with PostgreSQL and Redis handling file uploads, downloads, and deletions across AWS S3, Google Cloud Storage, and MinIO via expiring signed URLs with scoped access control - Reduced query latency and improved scalability by optimizing PostgreSQL with window functions, materialized views, and indexes, then exposed the data via interactive React visualizations for business stakeholders - Orchestrated long-running, fault-tolerant jobs with AWS Step Functions, reducing AWS Lambda timeouts and improving error recovery across 100K+ weekly executions	

PROJECTS

Dark Factory - orchestrator for PI agent <i>Elixir, TypeScript</i>	github.com/ozzyozbourne/dark-factory
Built a distributed coding-agent orchestrator that breaks large requests into dependency-aware task DAGs and executes them across multi-machine AI agents with retries and fault-tolerant timeout handling
