Dear Lyft Hiring Team,

I am applying for the **Software Engineer** position in San Francisco. I bring more than three years of professional engineering experience, a recently completed Master of Science in Computer Science from Pace University, and hands-on experience designing, launching, and operating production services, APIs, distributed systems, and customer-facing products. Lyft's purpose of serving and connecting people through transportation aligns with the kind of reliable, high-impact software I want to build.

At Sperse, I designed and launched Python and FastAPI services that route requests across more than 40 distributed components for over 10,000 users. I also built a TypeScript and React Flow product end-to-end, partnering with product and engineering stakeholders to turn ambiguous workflow ideas into durable customer features powered by Temporal and Redis. To support those products at scale, I developed a production MCP service exposing 160+ validated backend actions with structured schemas, monitoring, and tenant-aware authorization. This work maps directly to designing software components, services, and APIs while evaluating systems against reliability, performance, and user-impact goals.

I am comfortable moving from technical analysis and proof-of-concept prototypes to production-quality systems. I integrated OpenAI Codex with Bitbucket, proved the workflow on live reviews, and productionized it to automate 25–30 pull requests per week while saving engineers several hours. I also built OpenTelemetry trace-based tests and GitHub Actions CI/CD gates that detect latency, accuracy, and safety regressions before deployment. Earlier at Qualitest, I designed a Java and Spring Boot service backed by PostgreSQL and Redis and improved error recovery across more than 100,000 weekly AWS Step Functions executions.

I would welcome the opportunity to bring my Python, system design, testing, distributed-systems, and full-stack experience to Lyft and help launch services that create measurable business and user impact. I can be reached at +1 (945) 304-5781 or khanosaid726@gmail.com. Thank you for your time and consideration.

Sincerely,
Osaid Khan
