EDUCATION

Pace University <i>Master of Science (MS) in Computer Science (GPA - 4.0/4.0)</i>	New York City, NY <i>Jan 2024 - Dec 2025</i>
Dr. A.P.J. Abdul Kalam Technical University <i>Bachelor of Technology (B.Tech) in Computer Science</i>	Noida, India <i>Jul 2016 - Sep 2020</i>

TECHNICAL SKILLS

Languages: Python, Java, JavaScript/TypeScript, Rust
AWS Services: Lambda, S3, EC2, RDS, CloudWatch, Step Functions, CloudFormation, CloudFront, API Gateway
Frameworks: FastAPI, FastMCP, LangGraph, LangChain, LangSmith, PyTorch, React, Sprint Boot
Databases: PostgreSQL, Redis, MongoDB
Others: CI/CD, Git, Kafka, Node.js, Google Cloud
AI: Claude code, Codex, Pi coding-agent

PROFESSIONAL EXPERIENCE

Software Engineer Spense	Phoenix, AZ <i>Feb 2026 - present</i>
- Refactored Python-based backend services with strict dataflow contracts and async workers (Flask APIs, SQLAlchemy models, Celery queues), translating natural-language intents into safe, validated tool calls across 1000+ platform endpoints in a distributed environment for backend development, deployment, and scaling with stronger inter-service coordination - Implemented stateless services and event-driven design (idempotent handlers, queued retries, backpressure routing) for continuous sensor ingestion in a cloud-hosted embedded machine learning platform, adding GitHub Actions CI/CD pipelines and integration checks for testing software reliability across the development lifecycle in repeatable cloud deployment cycles	

AI Researcher Pace Artificial Intelligence Lab	New York City, NY <i>Sep 2025 - Dec 2025</i>
- Conducted applied machine learning research with StyleGAN, Stable Diffusion, CUDA, PyTorch, and LoRA on Pace University's HPC cluster, including automated AI-based anomaly detection experiments for iterative model evaluation - Built machine learning inference pipelines with vLLM and Hugging Face for secure, high-throughput model serving, including embedded development validation through Xcode	

Software Engineer Qualitest	Noida, India <i>Feb 2021 - Dec 2023</i>
- Designed a cloud-agnostic storage service using Python, PostgreSQL, and Redis for uploads/downloads/deletions across Google Cloud Storage, S3, and MinIO via expiring signed URLs, supporting high-concurrency, scalable backend systems while reducing logical complexity - Performed analysis of database performance (query simplification, indexing, and pool tuning) to optimize peak connections, then developed workflows with AWS Step Functions and AWS Lambda deployed through Beanstalk using cloud architecture best practices (stateless services, event-driven design, and resource optimization) for high-volume sensor data processing	

PROJECTS

Dark Factory - Orchestrator for AI coding CLIs <i>Crossterm, Ratatui, Y-crdt</i>	github.com/ozzyozbourne/dark-factory
- Implemented a distributed orchestrator that owns CLI PTY I/O, validates every command before shell execution, and broadcasts real-time updates through event-driven design for low-latency operator visibility - Extended multi-machine Y-crdt coordination to support reliable agent handoffs and reproducible test loops, improving distributed & scalable systems design patterns for cloud-hosted automation
