EDUCATION

Pace University

Master of Science (MS) in Computer Science (GPA - 4.0/4.0)

New York City, NY

Jan 2024 - Dec 2025

Dr. A.P.J. Abdul Kalam Technical University

Bachelor of Technology (B.Tech) in Computer Science

Noida, India

Jul 2016 - Sep 2020

TECHNICAL SKILLS

Languages: Python, Java, JavaScript/TypeScript, Rust, Html/Css

Others: Git, CI/CD, Docker, Kubernetes, Google ADK, OpenAI Agents SDK, LlamaIndex, Claude Code

AWS Services: CloudWatch, EC2, S3, Lambda, Step Functions, RDS, CloudFormation, CloudFront, API Gateway

Databases: PostgreSQL, Redis, MongoDB

Backend & Frameworks: FastAPI, Spring Boot, LangGraph, LangChain, FastMCP, LangSmith, Langfuse, React

PROFESSIONAL EXPERIENCE

Software Engineer

Phoenix, AZ

Sperse

Feb 2026 - Present

- Built **Python** GitHub Actions **CI/CD** pipelines for AI-agent fleet deployments with **OpenTelemetry** trace-based evaluation suites, automating **performance monitoring**, latency regression detection, and **reliability** checks before every production release
- Implemented real-time **metrics collection** and **observability** for long-running **Temporal** workflows using **Redis**, enabling live execution **monitoring** and trend analysis across a 10,000+-user fleet management dashboard
- Created a **Python FastMCP** server exposing 160+ automated backend actions with **OpenTelemetry** instrumentation, Pydantic validation, and audit logging — **automating complex systems engineering** workflows with tenant-aware access control
- Built a **multi-agent** CRM platform in **Python**, **LangGraph**, **LangChain**, and **FastAPI** routing requests to 40+ specialized sub-agents with automated failure recovery, retry semantics, and secure access control for 10,000+ users
- Engineered a **React Flow** and **TypeScript** visual workflow platform using **Temporal** for durable, fault-tolerant distributed job execution, enabling users to compose, **monitor**, and manage long-running agent pipelines with resumable state

Software Engineer

Noida, India

Qualitest

Feb 2021 - Dec 2023

- Orchestrated **100K+** weekly long-running jobs with **AWS Step Functions** and **Lambda**, implementing automated retry policies, fault recovery, and execution **monitoring** to maintain **reliability** and **efficiency** at scale
- Designed a cloud-agnostic infrastructure storage service in **Java** and **Spring Boot** with **PostgreSQL** and **Redis** handling file operations across **Google Cloud Storage**, **S3**, and **MinIO** via expiring signed URLs
- Reduced query latency and improved **performance** by optimizing **PostgreSQL** with window functions, materialized views, and indexes; analyzed execution statistics to identify trends and exposed results through interactive **React** visualizations for business stakeholders

PROJECTS

Dark Factory - orchestrator for PI agent | *Elixir, TypeScript*

github.com/ozzyozbourne/dark-factory

- Built a distributed coding-agent orchestrator in **Elixir** and **TypeScript** that decomposes large workloads into dependency-aware task DAGs, scheduling and executing jobs across a multi-machine agent fleet with automated retries and timeout recovery
- Implemented task-level fault isolation to contain agent failures without disrupting in-flight sibling tasks, enabling systematic **troubleshooting** of scheduling bugs and providing **observability** into per-task execution state across the distributed fleet
