Dear Hiring Team,

I am writing to apply for the Software Engineer role at North. I bring production experience building **Python / FastAPI micro-services**, reusable backend abstractions, and data-heavy systems that balance runtime memory, throughput, latency, and performance. At Sperse, I built a multi-agent CRM platform for 10,000+ users, and at Qualitest, I designed a cloud-agnostic storage service with **Java, Spring Boot, PostgreSQL, Redis**, and **AWS Step Functions**.

At Sperse, I built a **Python / FastAPI** platform that routed requests across 40+ specialized sub-agents, a **React Flow** and **TypeScript** workflow surface backed by **Temporal**, an agentic code review pipeline using **OpenAI Codex** and a Bitbucket MCP server, a **FastMCP** server with 160+ backend actions, and **OpenTelemetry** trace-based evals wired into **GitHub Actions CI/CD**. That work maps closely to North's focus on shipping production features, proposing architectures, building strong tests and guardrails, and creating code that other teams can reuse across the organization.

At Qualitest, I designed a cloud-agnostic Storage Service with **PostgreSQL** and **Redis** across **Google Cloud Storage, S3**, and **MinIO**, optimized **PostgreSQL** to cut query latency, and orchestrated 100K+ weekly jobs with **AWS Step Functions** to reduce timeouts and improve recovery. North's mission to deliver real-time visibility and automated savings for cloud spend, with a culture grounded in clarity, curiosity, and execution, is exactly the kind of problem space I want to help advance.

I would welcome the opportunity to contribute to **North** and help build the cloud spend management platform that teams rely on to manage cloud finances with less waste and more control. I can be reached at +1 (945) 304-5781 or khanosaid726@gmail.com.

Sincerely,
Osaid Khan
