Dear Hiring Team,

I am excited to apply for the Software Engineer role at Salesforce. I bring more than three years of professional experience architecting, designing, implementing, testing, and delivering scalable software, backed by an MS in Computer Science from Pace University with a 4.0 GPA. At Sperse, I built a Python/FastAPI multi-agent CRM product that routes requests across 40+ specialized agents for 10,000+ users - direct experience building highly scalable products that customers can trust, adopt, and use.

My recent work closely matches Salesforce's emphasis on high-quality delivery and platform stability. I partnered with engineers, product managers, and user experience stakeholders to build a React Flow and TypeScript workflow platform with durable, resumable Temporal execution. I also developed test strategies spanning unit/functional tests, automated test suites, OpenTelemetry trace-based evaluations, and GitHub Actions CI/CD gates for latency, accuracy, and safety regressions. Earlier at Qualitest, I applied object-oriented programming/design in Java and Spring Boot to a cloud-agnostic storage service spanning Google Cloud Storage, S3, and MinIO, and improved error recovery across 100K+ weekly AWS Step Functions executions.

I would also bring practical experience using and critically reviewing code and artifacts generated by LLM coding assistants and agentic tools. By integrating OpenAI Codex with a Bitbucket MCP server, I automated triage across 25-30 pull requests per week and reduced manual reviewer effort by several hours. That combination of disciplined test automation, telemetry metrics, and careful guidance of AI tools aligns with Salesforce's focus on trusted innovation in the agentic era.

Salesforce's mission to bring out the best in one another, deliver customer success, and inspire the industry resonates with how I approach engineering. I would welcome the opportunity to help build stable, scalable cloud products while advancing Salesforce's core values of Trust and Innovation. I can be reached at +1 (945) 304-5781 or khanosaid726@gmail.com. Thank you for your time and consideration; I look forward to connecting.

Sincerely,
Osaid Khan
