EDUCATION

Pace University <i>Master of Science (MS) in Computer Science (GPA - 4.0/4.0)</i>	New York City, NY <i>Jan 2024 - Dec 2025</i>
Dr. A.P.J. Abdul Kalam Technical University <i>Bachelor of Technology (B.Tech) in Computer Science</i>	Noida, India <i>Jul 2016 - Sep 2020</i>

TECHNICAL SKILLS

Languages: Python, Java, JavaScript/TypeScript, Rust
Others: Kafka, Google Cloud, Git, CI/CD, Node.js
Databases: MongoDB, PostgreSQL, Redis
Frameworks: PyTorch, FastAPI, FastMCP, LangGraph, LangChain, LangSmith, React, Sprint Boot
AWS Services: EC2, RDS, S3, Lambda, CloudWatch, Step Functions, CloudFormation, CloudFront, API Gateway
AI: Claude code, Codex, Pi coding-agent

PROFESSIONAL EXPERIENCE

Software Engineer Sperse	Phoenix, AZ <i>Feb 2026 - present</i>
- Architected a highly-scalable orchestration layer using Python/C++ for 1000+ endpoints, ensuring complex software architecture reliability and performance for automated workflows - Developed highly-scalable software solutions including API-aware templates and SDKs to run integration jobs and analyze algorithm performance in distributed systems - Implemented an observability and metrics layer using Langfuse/LangSmith for tracing, enabling real-time monitoring and software performance analysis across cloud simulation jobs - Collaborated with research engineers to design scenarios and metrics to predict real-world performance of autonomous algorithms, ensuring high performance and scalability	

AI Researcher Pace Artificial Intelligence Lab	New York City, NY <i>Sep 2025 - Dec 2025</i>
- Conducted research on robotic simulation systems using StyleGAN/Stable Diffusion to generate synthetic data for performance verification, leveraging PyTorch/LORA on an HPC cluster - Performed deep software performance analysis of generative models on Linux OS with C++ and CUDA, ensuring efficient model serving and highly-scalable inference across distributed nodes - Facilitated workshops on Linux OS, GPU programming with CUDA, and building autonomous agents to verify complex algorithms, reaching an audience of +50 software and research engineers	

Software Engineer Qualitest	Noida, India <i>Feb 2021 - Dec 2023</i>
- Designed a highly-scalable cloud-agnostic storage service using Python, PostgreSQL, and Redis to handle high-concurrency simulation data across AWS S3, GCS, and MinIO - Built an internal support system using Apache Kafka and Apache Spark for real-time event streaming and RAG, reducing resolution time by 20% through scalable software design - Developed backend workflows using AWS Step Functions and Docker to handle long-running simulation jobs in the cloud, preventing timeouts and ensuring reliable performance of autonomous systems	

PROJECTS

Dark Factory - Orchestrator for AI coding CLIs <i>Crosstern, Ratatui, Y-crdt</i>	github.com/ozzyozbourne/dark-factory
- Engineered a highly-scalable PTY-based orchestrator to verify and log commands before execution on Linux OS, ensuring performance analysis and secure distributed loops across machines using Y-crdt - Developed event-driven agentic loops to eliminate polling overhead and provide real-time updates for complex software sessions, enhancing the performance and scalability of developer tools
