Dear Uber Hiring Team,

I am applying for the **Software Engineer I** position in Sunnyvale. I bring more than three years of professional engineering experience, a recently completed Master of Science in Computer Science from Pace University, and production experience in Python and Java backend development, SQL, object-oriented design, data structures and algorithms, distributed systems, API integration, Docker, Kubernetes, and production monitoring. Uber's mission to create opportunity through movement makes the chance to improve reliable marketplace systems especially compelling.

At Sperser, I designed, developed, and tested Python and FastAPI services that route requests across more than 40 distributed components for over 10,000 users. I built scalable and resilient workflow architecture with Temporal and Redis, supporting high-concurrency execution, retries, resumability, and live progress. I also developed a production MCP service exposing 160+ validated backend actions, integrating clean APIs into a fully functional multi-tenant platform with structured schemas, secure access control, and error isolation. This work maps directly to building software components, integrating APIs, and operating large-scale distributed systems.

I have owned reliability and engineering productivity in production. I debugged live workflow issues with OpenTelemetry traces and built GitHub Actions CI/CD gates that prevent latency, accuracy, and safety regressions. I also partnered across engineering and product workflows to launch an OpenAI Codex and Bitbucket integration that automates 25–30 pull-request reviews per week and saves engineers several hours. Earlier at Qualitest, I designed a Java and Spring Boot backend with PostgreSQL and Redis and improved timeout handling and recovery across more than 100,000 weekly AWS Step Functions executions.

I would welcome the opportunity to bring this combination of backend development, scalable architecture, production debugging, API design, and cross-team execution to Uber. I can be reached at +1 (945) 304-5781 or khanosaid726@gmail.com. Thank you for your time and consideration.

Sincerely,
Osaid Khan
