EDUCATION

Pace University <i>Master of Science (MS) in Computer Science (GPA - 4.0/4.0)</i>	New York City, NY <i>Jan 2024 - Dec 2025</i>
Dr. A.P.J. Abdul Kalam Technical University <i>Bachelor of Technology (B.Tech) in Computer Science</i>	Noida, India <i>Jul 2016 - Sep 2020</i>

TECHNICAL SKILLS

Languages: Java, JavaScript/TypeScript, Python, Rust, Html/Css
Backend & Frameworks: Spring Boot, FastAPI, React, LangGraph, LangChain, FastMCP, LangSmith, Langfuse
Databases: PostgreSQL, MongoDB, Redis
AWS Services: Step Functions, API Gateway, RDS, Lambda, S3, EC2, CloudWatch, CloudFormation, CloudFront
Others: Git, CI/CD, Docker, Kubernetes, Google ADK, OpenAI Agents SDK, LlamaIndex, Claude Code

PROFESSIONAL EXPERIENCE

Software Engineer Sperse	Phoenix, AZ <i>Feb 2026 - Present</i>
- Built a FastMCP-based REST API integration layer exposing 160+ backend actions consumed by AI agents across multi-tenant CRM workflows, with JSON schema validation, Pydantic contracts, and OpenTelemetry instrumentation for production observability - Designed end-to-end process workflows using Temporal with service task delegation, exception handling, retry policies, and resume-on-failure semantics — orchestrating complex multi-step operations across distributed REST API backends - Built a React Flow and TypeScript visual workflow platform enabling users to design, execute, and manage multi-step process flows backed by Temporal for durable, resumable orchestration with live Redis progress tracking - Built GitHub Actions CI/CD pipelines for AI-agent deployments, running OpenTelemetry trace-based evals gating every release on latency, accuracy, and safety regressions before production rollout	
Software Engineer Qualitest	Noida, India <i>Feb 2021 - Dec 2023</i>
- Designed a REST API-driven, cloud-agnostic Storage Service in Java and Spring Boot with PostgreSQL and Redis, integrating Google Cloud Storage, S3, and MinIO backends via expiring signed URLs for secure, cross-system file operations - Orchestrated long-running business processes with AWS Step Functions, implementing exception-handling and retry policies that reduced AWS Lambda timeouts and improved error recovery across 100K+ weekly executions - Reduced query latency and improved scalability by optimizing PostgreSQL (relational database) with window functions, materialized views, and indexes; exposed process metrics via interactive React dashboards for business stakeholders	

PROJECTS

Dark Factory - orchestrator for PI agent <i>Elixir, TypeScript</i>	github.com/ozzyozbourne/dark-factory
- Built a distributed process-orchestration engine that decomposes requests into dependency-aware task DAGs, executing them across multi-machine agents with retry and timeout handling and REST API hooks for external system integration - Implemented JSON-encoded inter-agent message contracts and centralized state persistence, enabling idempotent, fault-tolerant re-execution with full observability across the distributed process lifecycle
