EDUCATION

Pace University <i>Master of Science (MS) in Computer Science (GPA - 4.0/4.0)</i>	New York City, NY <i>Jan 2024 - Dec 2025</i>
Dr. A.P.J. Abdul Kalam Technical University <i>Bachelor of Technology (B.Tech) in Computer Science</i>	Noida, India <i>Jul 2016 - Sep 2020</i>

TECHNICAL SKILLS

Languages: Python, TypeScript, Node.js, Java, JavaScript
Frontend & Backend: React, Next.js, FastAPI, Spring Boot, REST APIs, LangGraph, LangChain, FastMCP
Generative AI: Large language models (LLMs), RAG, LlamaIndex, OpenAI embeddings, Pgvector, AI agents
Data & Infrastructure: PostgreSQL, Redis, AWS, Docker, Kubernetes, Temporal, OpenTelemetry
Engineering: Git, CI/CD, GitHub Actions, automated tests, production debugging, technical documentation

PROFESSIONAL EXPERIENCE

Software Engineer Sperse	Phoenix, AZ <i>Feb 2026 - Present</i>
- Delivered an end-to-end Python, TypeScript, and React multi-agent CRM platform—from loosely specified problem through code, tests, and deployment—routing requests across 40+ specialized agents for 10,000+ users - Investigated issues in running production systems by adding OpenTelemetry trace-based evaluations and Redis progress tracking to long-running Temporal workflows, exposing latency, accuracy, safety, and live execution failures - Built and shipped a FastMCP server that gives large language models (LLMs) secure access to 160+ backend actions, with validated tool calls, tenant-aware access control, monitoring, and thorough technical documentation - Owned quality and smooth deployment through GitHub Actions CI/CD pipelines that test AI-agent releases and gate production changes; also automated daily PR triage across 25–30 PRs/week with OpenAI Codex	
Software Engineer Qualitest	Noida, India <i>Feb 2021 - Dec 2023</i>
- Delivered a cloud-agnostic Storage Service end to end in Java, Spring Boot, PostgreSQL, and Redis, supporting uploads, downloads, and deletions across Google Cloud Storage, S3, and MinIO via expiring signed URLs - Located performance bottlenecks in an unfamiliar data system, optimizing PostgreSQL with window functions, materialized views, and indexes and delivering interactive React visualizations for business stakeholders - Drove production reliability for 100K+ weekly executions by orchestrating long-running jobs with AWS Step Functions, preventing AWS Lambda timeouts and improving error recovery and deployment stability	

PROJECTS

Dark Factory - orchestrator for PI agent <i>Elixir, TypeScript</i>	github.com/ozzyozbourne/dark-factory
- Built and shipped a distributed coding-agent orchestrator that decomposes ambiguous requests into dependency-aware task DAGs and executes them across multiple machines with retries and timeout handling - Applied modern generative AI technologies to independently drive less-defined software problems from problem statement to working code while preserving resumable execution and failure isolation
