Dear Hiring Team,

It is with great pleasure that I submit my candidacy for the **Ambient Agents Engineer** with **Commure**. I bring over three years of professional experience in building scalable Node.js/Express backends, RAG systems, and AI agent orchestration, along with a strong academic foundation as a Master of Science in Computer Science graduate from Pace University, NY.

Through my experience across engineering roles, I have built and delivered production-grade systems that directly reflect **the technical depth this position demands in architecting multi-agent orchestration systems and building scalable Node.js backends**. As a Software Engineer at Sperse, I architected a concurrent multi-agent orchestration system using LangChain and LangGraph to enable scalable tool execution across enterprise workflows. I also developed an MCP interaction layer that translates natural-language intents into safe, validated tool calls across 1,000+ endpoints—ensuring **Security by Design** while reducing end-to-end latency by 60% through prompt routing and concurrency optimizations. Prior to Sperse, at Qualitest, I built an internal support **Ambient Agent** using RAG and a PostgreSQL vector store, which reduced ticket resolution times by 20%. I also designed a cloud-agnostic Storage Service using Node.js and developed complex backend workflows using Kafka and AWS Step Functions to handle high-volume data imports—addressing **the kind of systems-level thinking and operational stability focus this role demands at Commure**. These roles have prepared me to **contribute meaningfully to the team’s core engineering responsibilities by designing, developing, and deploying complex AI-powered features that enhance healthcare workflows**.

My academic research and leadership experience have given me a rigorous foundation in model lifecycle management and technical mentorship—skills that translate directly into **the action-biased “Day 1” culture and commitment to extreme ownership this team values**. As an AI Researcher at the Pace Artificial Intelligence Lab, I managed the full ML lifecycle for generative models using PyTorch and CUDA, optimizing inference with vLLM for high-performance deployment. Beyond individual contributions, I led technical workshops on building AI Agents with LangChain and LangGraph for 50+ students. This experience required me to break down complex technical concepts and promote best practices—directly mirroring **the mentorship and knowledge-sharing responsibilities central to this role**. I am eager to bring this blend of technical rigor and collaborative spirit to **Commure and its mission to reimagine care delivery**.

I have always been passionate about **Speed Above All Else and Extreme Ownership** and envision myself contributing my talent to the furthering of **creating the “operating system for healthcare” and simplifying the industry for providers and patients**. I would love to discuss my interest in this position with your team and can be reached at +1 (945) 304-5781 or khanosaid726@gmail.com. Thank you for your time and consideration, I look forward to connecting!

Sincerely,
Osaid Khan
