EDUCATION

Pace University

Master of Science (MS) in Computer Science (GPA - 4.0/4.0)

New York City, NY

Jan 2024 - Dec 2025

Dr. A.P.J. Abdul Kalam Technical University

Bachelor of Technology (B.Tech) in Computer Science

Noida, India

Jul 2016 - Sep 2020

TECHNICAL SKILLS

AWS Services: EC2, RDS, S3, Lambda, CloudWatch, Step Functions, CloudFormation, CloudFront, API Gateway

Others: Git, CI/CD, Docker, Kubernetes, Google ADK, OpenAI Agents SDK, LlamaIndex, Claude Code

Languages: Python, Java, JavaScript/TypeScript, Rust, Html/Css

Databases: PostgreSQL, MongoDB, Redis

Backend & Frameworks: FastAPI, Spring Boot, React, LangGraph, LangChain, FastMCP, LangSmith, Langfuse

PROFESSIONAL EXPERIENCE

Software Engineer

Phoenix, AZ

Sperse

Feb 2026 - Present

- Built **GitHub Actions CI/CD** pipelines with **AWS CloudFormation (Infrastructure as Code)** for cloud infrastructure deployments, integrating **OpenTelemetry-based monitoring** and **alerting** to enforce **security best practices** and **compliance** gates — flagging configuration drift, patch failures, and safety violations before production release
- Engineered a **FastMCP** server exposing 160+ backend actions with built-in **monitoring**, **logging**, and structured operational **runbooks**, enforcing tenant-aware **identity** and **access management** and **security policies** across multi-tenant enterprise customers with audit-grade observability
- Deployed a **multi-agent** CRM platform on **AWS** infrastructure (**EC2, RDS, S3**) using **Python, FastAPI**, and **LangGraph**, serving 10,000+ users with secure **access control** and role-based identity policies propagated across 40+ sub-agents via JWT
- Built **LlamaIndex-powered RAG** agents on **AWS (EC2, S3, RDS, Pgvector)** with **CloudWatch** monitoring and automated **runbook** generation, optimizing **cloud infrastructure** usage and alerting thresholds across distributed retrieval workloads

Software Engineer

Noida, India

Qualitest

Feb 2021 - Dec 2023

- Designed a **cloud-agnostic** Storage Service in **Java** and **Spring Boot** with **PostgreSQL** and **Redis** enabling **cloud migration** and **disaster recovery** across **AWS S3, Google Cloud Storage**, and **MinIO** via expiring signed URLs — maintaining **business continuity** across **hybrid cloud** environments
- Orchestrated backup and **disaster recovery** workflows with **AWS Step Functions**, implementing automated retry logic and error recovery to eliminate **Lambda** timeouts and ensure **business continuity** across **100K+** weekly executions — improving infrastructure resilience and reducing manual intervention
- Optimized **PostgreSQL** server performance through window functions, materialized views, and index tuning, surfacing infrastructure health metrics and capacity analytics via interactive **React** dashboards to support **lifecycle management** decisions for business stakeholders

PROJECTS

Dark Factory - orchestrator for PI agent | *Elixir, TypeScript*

github.com/ozzyozbourne/dark-factory

- Built a **distributed** orchestrator partitioning large workloads into dependency-aware task DAGs and executing them across multi-machine environments with automated retries, **timeout handling**, and fault-tolerant recovery — targeting **high-availability cloud infrastructure** deployments
