EDUCATION

Pace University

Master of Science (MS) in Computer Science (GPA - 4.0/4.0)

New York City, NY

Jan 2024 - Dec 2025

Dr. A.P.J. Abdul Kalam Technical University

Bachelor of Technology (B.Tech) in Computer Science

Noida, India

Jul 2016 - Sep 2020

TECHNICAL SKILLS

Languages & Systems: Java, Python, JavaScript/TypeScript, Linux fundamentals, computer architecture, distributed network systems

Cloud Infrastructure: AWS, S3, Lambda, Step Functions, EC2, RDS, CloudWatch, Docker, Kubernetes, bare metal, REST APIs

Network Engineering: TCP/IP, BGP, VXLAN, Open vSwitch (OVS), software-defined networking, cloud network infrastructure, primitives, and features

Engineering Practices: Git, testing, CI/CD, coding standards, code reviews, design documentation, software rollout, user-facing APIs

Collaboration: Good communication, collaborative mindset, growth mindset, mentorship, pairing, cross-team collaboration, open source exploration

PROFESSIONAL EXPERIENCE

Software Engineer

Sperse

Phoenix, AZ

Feb 2026 - Present

- Built and operated a production **distributed systems** platform with **Python**, FastAPI, and Temporal, routing requests across 40+ services and agents while serving 10,000+ users through secure user-facing APIs
- Developed clean, well-tested, maintainable code for 160+ backend actions, using Pydantic contracts, tenant-aware access control, and OpenTelemetry monitoring to improve rollout safety and reliability
- Built a **Git**-based code review pipeline integrating OpenAI Codex with Bitbucket, automating triage across 25–30 PRs/week and strengthening both giving and receiving feedback through consistent review workflows
- Contributed design documentation, code reviews, and architecture and design discussions for durable workflows, then shipped **CI/CD** gates that evaluated latency, accuracy, and safety before production deployment

Software Engineer

Qualitest

Noida, India

Feb 2021 - Dec 2023

- Engineered **cloud infrastructure** in **Java** and Spring Boot for a storage service spanning AWS S3, Google Cloud Storage, and MinIO, using expiring signed URLs for secure uploads, downloads, and deletions
- Led testing and rollout from cloud services to user-facing APIs with **AWS Step Functions** and Lambda, reducing timeouts and improving error recovery across 100K+ weekly executions
- Optimized PostgreSQL with window functions, materialized views, and indexes, then exposed results through React APIs and visualizations that improved performance and stakeholder visibility

PROJECTS

Dark Factory - orchestrator for PI agent | *Elixir, TypeScript, Open Source* github.com/ozzyozbourne/dark-factory

- Built an **open source** distributed-systems orchestrator that transforms large requests into dependency-aware task DAGs and coordinates multi-machine execution with retries and timeout handling
- Designed fault-tolerant scheduling and worker primitives for scalable, reliable distributed execution, applying source control, testable interfaces, and rapid learning across an independently owned project
