EDUCATION

Pace University

Master of Science (MS) in Computer Science (GPA - 4.0/4.0)

New York City, NY

Jan 2024 - Dec 2025

Dr. A.P.J. Abdul Kalam Technical University

Bachelor of Technology (B.Tech) in Computer Science

Noida, India

Jul 2016 - Sep 2020

TECHNICAL SKILLS

Backend & Frameworks: React, FastAPI, Spring Boot, LangGraph, LangChain, FastMCP, LangSmith, Langfuse

Languages: JavaScript/TypeScript, Java, Python, Rust, Html/Css

Databases: PostgreSQL, Redis, MongoDB

AWS Services: CloudWatch, API Gateway, Lambda, EC2, RDS, S3, Step Functions, CloudFormation, CloudFront

Others: Git, CI/CD, Docker, Kubernetes, Claude Code, Google ADK, OpenAI Agents SDK, LlamaIndex

PROFESSIONAL EXPERIENCE

Software Engineer

Phoenix, AZ

Sperse

Feb 2026 - Present

- Built a **React**, **Next.js**, and **TypeScript** internal platform tool for agent operations, enabling 10,000+ users to create, run, and manage swarms with durable **Temporal** execution and live progress tracking in **Redis**
- Developed **FastAPI**, **LangGraph**, and **LangChain** backend services, **REST APIs**, and data models for a multi-agent CRM platform that routed requests across 40+ specialized sub-agents with secure access control and tenant-aware **JWT** propagation
- Created a **FastMCP** server exposing 160+ backend actions, adding validation, logging, metrics, monitoring, and **OpenTelemetry** instrumentation to automate CRM workflows securely across multiple customers
- Automated daily PR triage with **OpenAI Codex** and a custom Bitbucket MCP server, improving **developer productivity** by reducing manual reviewer load across 25–30 PRs/week and wiring the review loop into **GitHub Actions CI/CD** checks that flagged latency, accuracy, and safety regressions before production

Software Engineer

Noida, India

Qualitest

Feb 2021 - Dec 2023

- Designed a cloud-agnostic Storage Service in **Java** and **Spring Boot** with **PostgreSQL** and **Redis** that handled file uploads, downloads, and deletions across **S3**, **Google Cloud Storage**, and **MinIO** via expiring signed URLs
- Reduced query latency and improved scalability by optimizing **PostgreSQL** databases with window functions, materialized views, and indexes, then exposed the data via interactive **React** visualizations for business stakeholders
- Orchestrated long-running jobs with **AWS Step Functions**, reducing **AWS Lambda** timeouts and improving error recovery across 100K+ weekly executions

PROJECTS

Dark Factory - orchestrator for PI agent | *Elixir, TypeScript*

github.com/ozzyozbourne/dark-factory

- Built a distributed coding-agent orchestrator in **Elixir** and **TypeScript** that breaks large coding requests into dependency-aware task DAGs and executes them across multi-machine AI agents with retries and timeout handling
- Added execution handoff and recovery logic so failed steps can be retried deterministically, keeping multi-step workflows observable and repeatable without manual intervention
