EDUCATION

Pace University

Master of Science (MS) in Computer Science (GPA - 4.0/4.0)

New York City, NY

Jan 2024 - Dec 2025

Dr. A.P.J. Abdul Kalam Technical University

Bachelor of Technology (B.Tech) in Computer Science

Noida, India

Jul 2016 - Sep 2020

TECHNICAL SKILLS

Databases: PostgreSQL, MongoDB, Redis

Languages: Java, Python, JavaScript/TypeScript, Rust, Html/Css

Backend & Frameworks: Spring Boot, FastAPI, React, LangGraph, LangChain, FastMCP, LangSmith, Langfuse

AWS Services: EC2, RDS, S3, Lambda, CloudWatch, Step Functions, CloudFormation, CloudFront, API Gateway

Others: Git, CI/CD, Docker, Kubernetes, Google ADK, OpenAI Agents SDK, LlamaIndex, Claude Code

PROFESSIONAL EXPERIENCE

Software Engineer

Sperse

Phoenix, AZ

Feb 2026 - Present

- Built a **Python / FastAPI** multi-agent CRM backend that routes requests across 40+ specialized sub-agents for 10,000+ users, combining secure access control with production **debugging** paths and structured handoff for support-driven workflows
- Designed a durable workflow layer with **React Flow**, **Temporal**, and **Redis** to run resumable agentic jobs, surface live execution state, and recover cleanly from failures during long-running execution
- Built **GitHub Actions CI/CD** pipelines for AI-agent deployments with **OpenTelemetry** trace-based eval suites, verifying latency, accuracy, and safety before production release across the full **software development life cycle**
- Automated daily PR triage across 25–30 PRs/week by integrating **OpenAI Codex** with a custom Bitbucket **MCP** server, reducing manual reviewer load and tightening **quality assurance** through peer reviews of code changes
- Created a production **FastMCP** server exposing 160+ backend actions with **OpenTelemetry** monitoring and Pydantic validation, improving **documentation** of tool behavior and failure modes for internal automation

Software Engineer

Qualitest

Noida, India

Feb 2021 - Dec 2023

- Designed a cloud-agnostic Storage Service in **Java** and **Spring Boot** with **PostgreSQL** and **Redis** that handles file uploads, downloads, and deletions across **Google Cloud Storage**, **S3**, and **MinIO** via expiring signed URLs
- Reduced **SQL** query latency and improved scalability by optimizing **PostgreSQL** with window functions, materialized views, and indexes, then exposed the data via interactive **React** visualizations for business stakeholders
- Orchestrated long-running jobs with **AWS Step Functions**, reducing **AWS Lambda** timeouts and improving error recovery across **100K+** weekly executions while maintaining deployment documentation and operational runbooks in a **Unix/Linux** environment; resolved **production support** problems as part of the full **software development life cycle**

PROJECTS

Dark Factory - orchestrator for PI agent | *Elixir, TypeScript*

github.com/ozzyozbourne/dark-factory

- Built a distributed coding-agent orchestrator that breaks large requests into dependency-aware task DAGs and executes them across multi-machine AI agents with retries and timeout handling
- Modeled the system as a reliable control plane for **large-scale distributed systems** experimentation, keeping task execution deterministic enough to debug, rerun, and extend as new agent capabilities were added
