Dear Hiring Team,

I am excited to apply for the **Application Operations Engineer - EDI & Claims Systems** role at **Etactics**. I bring 3+ years of software engineering and production operations experience, plus a strong academic foundation as a Master of Science in Computer Science graduate from Pace University.

At Sperse, I owned production application support for an MCP interaction layer spanning 1,000+ platform endpoints, converting operational support tickets into targeted fixes and troubleshooting incidents through tracing and structured logs in Langfuse and LangSmith. I also coordinated production deployments with release readiness checks, smoke testing, and post-deployment verification, improving system performance by reducing latency by 60% and lowering API cost by 50%. That hands-on ownership aligns directly with your need for reliable production support, disciplined releases, and practical operational improvements across EDI and claims workflows.

At Qualitest, I built an internal support chatbot with LangChain, RAG, and PostgreSQL that reduced ticket resolution time by 20%, and developed Python/PostgreSQL/Redis services for secure file transfers across Google Cloud Storage, S3, and MinIO. I also delivered AWS Step Functions batch jobs under structured change-management procedures. Combined with my research work using vLLM and Hugging Face for secure deployment validation and troubleshooting, this has prepared me to partner effectively with Operations, Engineering, and Product while keeping business-critical processing reliable.

Etactics' mission of putting customer outcomes first through innovative solutions strongly resonates with me, as do your values of **Client-Centricity** and **Continuous Improvement**. I am eager to contribute to that mission by supporting stable, auditable, and efficient production operations for your EDI and claims systems. I would love to discuss my interest in this role and can be reached at +1 (945) 304-5781 or khanosaid726@gmail.com.

Sincerely,
Osaid Khan
