Dear Hiring Team,

It is with great pleasure that I submit my candidacy for the **Full Stack Software Engineer** with **Insight Analytics CCT**. I bring over three years of professional experience in shipping production systems across the TypeScript stack, along with a strong academic foundation as a Master of Science in Computer Science graduate from Pace University, NY.

Through my experience across engineering roles, I have built and delivered production-grade full-stack features that directly reflect **the strong working knowledge of TypeScript, React, and AWS Lambda this position demands**. As a Software Engineer at Sperse, I have designed and shipped features across our TypeScript frontend and backend, owning the entire production lifecycle from CI/CD to performance observability. I have extensive experience working day-to-day in Claude Code and comparable agentic coding tools, contributing to team process improvements while implementing AWS infrastructure using Terraform. Prior to Sperse, as a Software Engineer at Qualitest, I contributed to the backbone infrastructure that thousands of users rely on daily. I designed and developed a cloud-native Storage Service using Python, PostgreSQL, and AWS S3 that managed complex IAM networking and storage—giving me direct, hands-on experience with the **serverless architectures and event-driven systems central to your next-generation analytics product**. I also contributed to an Identity & Access Management platform built with React and AWS, supporting thousands of users across 30+ applications, and developed backend workflows using AWS Step Functions to handle long-running data import jobs for warehouses—which required **rigorous data modeling and a focus on operational stability**. Together, these roles have prepared me to **design and ship full-stack features that hold up against real customer data** and drive impact within the Casino Insight™ platform.

My academic research experience has given me a rigorous foundation in AI agents and technical communication—skills that translate directly into **the innovative and collaborative culture Insight Analytics CCT values**. As an AI Researcher at the Pace Artificial Intelligence Lab, I conducted applied research on AI Agents using LangChain and LangGraph, focusing on translating natural-language intents into autonomous actions. I was responsible for managing the full model development lifecycle, ensuring both performance and secure, efficient model serving. Beyond building the systems myself, I led workshops on building AI Agents and agentic coding workflows for an audience of 50+ students. Designing and delivering those sessions required me to break down complex technical concepts clearly—directly mirroring **the technical leadership and collaborative spirit needed to partner with designers and data engineers**. This experience has shaped me into an engineer who builds with rigor and communicates with clarity, both of which I would bring to **Insight Analytics CCT and its mission**.

I have always been passionate about **fostering innovation and providing clear insights through streamlined workflows** and envision myself contributing my talent to the furthering of **the goal of empowering casino teams to work smarter through actionable data**. I would love to discuss my interest in this position with your team and can be reached at +1 (945) 304-5781 or [khanosaid726@gmail.com](mailto:khanosaid726@gmail.com). Thank you for your time and consideration, I look forward to connecting!

Sincerely,  
Osaid Khan
