EDUCATION

Pace University

Master of Science (MS) in Computer Science (GPA - 4.0/4.0)

New York City, NY

Jan 2024 - Dec 2025

Dr. A.P.J. Abdul Kalam Technical University

Bachelor of Technology (B.Tech) in Computer Science

Noida, India

Jul 2016 - Sep 2020

TECHNICAL SKILLS

Languages: *Java, Python*, JavaScript/TypeScript, Rust, HTML/CSS

AI & Machine Learning: *Machine Learning Frameworks, Large Language Models (LLMs)*, LangGraph, LangChain, LlamaIndex, OpenAI Agents SDK

Distributed Systems: *Distributed Systems*, FastAPI, Spring Boot, REST APIs, Temporal, Redis, PostgreSQL, Pgvector

Cloud & Engineering: AWS (EC2, RDS, S3, Lambda, Step Functions, CloudWatch), Docker, Kubernetes, Git, CI/CD, testing, system design

PROFESSIONAL EXPERIENCE

Software Engineer

Sperse

Phoenix, AZ

Feb 2026 - Present

- Designed, coded, tested, and deployed a production **distributed systems** platform with **Python**, **FastAPI**, **LangGraph**, and **Large Language Models (LLMs)**, routing requests across 40+ specialized agents for 10,000+ users with tenant-aware access control
- Investigated cutting-edge **machine learning frameworks** and built a **LlamaIndex** RAG service with OpenAI embeddings and **Pgvector**, translating product questions into grounded answers and ready-to-run REST API examples
- Delivered a **TypeScript**, **React Flow**, and **Temporal** visual workflow product across the full development lifecycle, enabling users to design, execute, and monitor durable agent swarms with live status persisted in **Redis**
- Built and tested a **FastMCP** service exposing 160+ validated backend actions, then used architectural discussions and code reviews to reinforce **coding standards** and ship GitHub Actions **CI/CD** evaluations for latency, accuracy, and safety

Software Engineer

Qualitest

Noida, India

Feb 2021 - Dec 2023

- Designed and deployed a cloud-agnostic Storage Service in **Java**, **Spring Boot**, **PostgreSQL**, and **Redis**, supporting secure uploads, downloads, and deletions across Google Cloud Storage, S3, and MinIO through expiring signed URLs
- Improved distributed data workflows by optimizing **PostgreSQL** (window functions, materialized views, indexes) and partnering with **cross-functional teams** and business stakeholders to deliver **React** visualizations with lower query latency
- Orchestrated and tested production jobs with **AWS Step Functions** and **Lambda**, eliminating timeout bottlenecks and strengthening error recovery across **100K+ weekly executions**

PROJECTS

Dark Factory - orchestrator for PI agent | *Elixir, TypeScript, Distributed Systems* | github.com/ozzyozbourne/dark-factory

- Engineered a multi-machine coding-agent orchestrator that converts ambiguous requests into dependency-aware task DAGs, coordinates agents through retries and timeout handling, and provides a practical foundation for scalable **distributed systems**
- Implemented end-to-end execution controls and failure recovery in **Elixir** and **TypeScript**, applying system design and software engineering concepts to move complex work from initial design through reliable completion
