EDUCATION

Pace University

Master of Science (MS) in Computer Science (GPA - 4.0/4.0)

New York City, NY

Jan 2024 - Dec 2025

Dr. A.P.J. Abdul Kalam Technical University

Bachelor of Technology (B.Tech) in Computer Science

Noida, India

Jul 2016 - Sep 2020

TECHNICAL SKILLS

Languages: JavaScript/TypeScript, Python, Java, Rust, Html/Css

Backend & Frameworks: React, FastAPI, Spring Boot, LangGraph, LangChain, FastMCP, LangSmith, Langfuse

Databases: PostgreSQL, Redis, MongoDB

AWS Services: EC2, RDS, S3, Lambda, CloudWatch, Step Functions, CloudFormation, CloudFront, API Gateway

Others: Git, CI/CD, Docker, Kubernetes, Google ADK, OpenAI Agents SDK, LlamaIndex, Claude Code

PROFESSIONAL EXPERIENCE

Software Engineer

Phoenix, AZ

Sperse

Feb 2026 - Present

- Built a **TypeScript** and **React Flow** based **full-stack** visual workflow platform shipping new features to thousands of users daily, using **Temporal** for durable, resumable execution across long-running agentic pipelines
- Shipped **LLM**-powered **full-stack** features serving 10,000+ users by building a **multi-agent** CRM platform in **Python**, **LangGraph**, **LangChain**, and **FastAPI** that routes requests across 40+ specialized sub-agents with tenant-aware access control
- Created a **FastMCP**-powered server exposing 160+ **LLM**-callable backend actions as **full-stack** data collection interfaces, automating workflows across multiple customers with **real-time OpenTelemetry** monitoring
- Built **LlamaIndex**-powered **RAG** agents using OpenAI embeddings and **Pgvector** to derive **actionable insights** from large-scale product documentation and generate ready-to-run **REST** API examples for customers
- Built GitHub Actions **CI/CD** pipelines to build, deploy, and evaluate **LLM**-based features in production, running OpenTelemetry trace-based evals to flag latency, accuracy, and safety regressions before every release

Software Engineer

Noida, India

Qualitest

Feb 2021 - Dec 2023

- Orchestrated scalable **data processing** pipelines with **AWS Step Functions**, eliminating **Lambda** timeouts and ensuring reliable error recovery across **100K+** weekly executions through configurable retry and fault-tolerance logic
- Designed a cloud-agnostic storage pipeline in **Java** and **Spring Boot** with **PostgreSQL** and **Redis** handling ingestion, processing, and delivery across **Google Cloud Storage**, **S3**, and **MinIO** via expiring signed URLs
- Reduced query latency and improved **scalability** by optimizing **PostgreSQL** with window functions, materialized views, and indexes; exposed results through interactive **React** visualizations for business stakeholders

PROJECTS

Dark Factory - orchestrator for PI agent | *Elixir, TypeScript*

github.com/ozzyozbourne/dark-factory

- Built a **distributed full-stack** coding-agent orchestrator in **TypeScript** that decomposes large requests into dependency-aware task **DAGs**, enabling parallel execution across multi-machine AI agents
- Engineered fault-tolerant task scheduling with configurable retries, timeout handling, and state recovery to ensure reliable end-to-end pipeline execution across distributed AI agent workers
