Dear Hiring Team,

I am applying for the **Software Engineer, AI/ML Ops** role at **BlackLine**. My background is in building production backend systems, **data pipelines**, and **LLM-based systems** with **Python, LangGraph, LangChain, FastAPI, Java, PostgreSQL, Redis, AWS Services, CI/CD, Docker**, and **Kubernetes**, which lines up well with the technical depth and operational discipline this position requires.

At Sperse, I built a **multi-agent** CRM platform that routes 10,000+ users across 40+ specialized sub-agents with tenant-aware access control and secure tool execution. I also built **CI/CD** pipelines for AI-agent deployments in **Docker** and **Kubernetes**, adding automated testing and release gates to catch latency, accuracy, and safety regressions before production. In parallel, I created a **FastMCP** server that exposed 160+ backend actions to AI agents and built an agentic code-review pipeline with **OpenAI Agents SDK** and **Claude Code**, automating daily PR triage across 25-30 PRs/week while reducing manual reviewer load by several hours.

Earlier at Qualitest, I designed a cloud-agnostic Storage Service in **Java** and **Spring Boot** with **PostgreSQL** and **Redis** that handled file uploads, downloads, and deletions across **Google Cloud Storage, S3**, and **MinIO** via expiring signed URLs. I also reduced query latency and improved scalability by optimizing **PostgreSQL** with window functions, materialized views, and indexes, then orchestrated long-running jobs with **AWS Step Functions** to reduce **AWS Lambda** timeouts and improve error recovery across 100K+ weekly executions. That mix of data integration, performance tuning, and production reliability is the same foundation I would bring to BlackLine's data pipeline and automation work.

BlackLine's mission to inspire, power, and guide digital finance transformation, along with its values of **Think, Create, Serve**, resonates with how I work. I care about building reliable systems that reduce manual effort, create clear operational visibility, and improve auditability so teams can move faster with confidence. I would value the opportunity to contribute to this team and its mission.

Sincerely, Osaid Khan

Sincerely,
Osaid Khan
