EDUCATION

Pace University <i>Master of Science (MS) in Computer Science (GPA - 4.0/4.0)</i>	New York City, NY <i>Jan 2024 - Dec 2025</i>
Dr. A.P.J. Abdul Kalam Technical University <i>Bachelor of Technology (B.Tech) in Computer Science</i>	Noida, India <i>Jul 2016 - Sep 2020</i>

TECHNICAL SKILLS

Backend & Frameworks: LangGraph, LangChain, FastMCP, FastAPI, Spring Boot, LangSmith, Langfuse, React
AWS Services: Step Functions, Lambda, CloudWatch, S3, EC2, RDS, CloudFormation, CloudFront, API Gateway
Languages: Python, Java, JavaScript/TypeScript, Rust, Html/Css
Databases: PostgreSQL, Redis, MongoDB
Others: Git, CI/CD, Docker, Kubernetes, OpenAI Agents SDK, LlamaIndex, Claude Code, Google ADK

PROFESSIONAL EXPERIENCE

Software Engineer Sperse	Phoenix, AZ <i>Feb 2026 - Present</i>
- Designed and operated large-scale distributed services for production AI agents and developer-intelligence systems using Python, LangGraph, LangChain, and FastAPI, serving 10,000+ users across 40+ specialized sub-agents with secure access control - Built agentic code-generation systems for autonomous software delivery by integrating OpenAI Codex with a custom Bitbucket MCP server, turning engineering intake into reviewed code changes and automating PR triage across 25-30 PRs/week - Built retrieval and indexing platforms and data platforms with LlamaIndex, OpenAI embeddings, and Pgvector, grounding AI agents in product documentation and generating ready-to-run REST API examples from natural-language specifications - Built GitHub Actions CI/CD pipelines for AI-agent deployments, running OpenTelemetry trace-based evaluation frameworks and evaluation and quality infrastructure for agent correctness across the software development life cycle (code reviews, source control management, build processes, testing, and operations) - Built a React Flow and TypeScript workflow platform for agentic swarms, using Temporal and Redis for durable execution, live progress tracking, and operational observability across long-running workflows	
Software Engineer Qualitest	Noida, India <i>Feb 2021 - Dec 2023</i>
- Designed large-scale distributed services in Java and Spring Boot with PostgreSQL and Redis, handling file uploads, downloads, and deletions across Google Cloud Storage, S3, and MinIO via API design patterns for reliability and scaling - Optimized large-scale data and retrieval paths by tuning PostgreSQL window functions, materialized views, and indexes, then exposed results through React visualizations to improve query latency and stakeholder decision-making - Owned operational excellence for 100K+ weekly executions with AWS Step Functions, reducing AWS Lambda timeouts and improving reliability, error recovery, cost control, and 24/7 operations through structured retry policies	

PROJECTS

Dark Factory - orchestrator for PI agent <i>Elixir, TypeScript</i>	github.com/ozzyozbourne/dark-factory
- Built a distributed coding-agent orchestrator for LLM orchestration that breaks large coding requests into dependency-aware task DAGs and executes them across multi-machine AI agents with retries and timeout handling - Designed the scheduling layer for autonomous development workflows in Elixir and TypeScript, coordinating parallel agent execution, failure recovery, and quality checks before production-ready code changes
