Dear General Motors Hiring Team,

I am applying for the **Software Engineer, Autonomy Behavior Validation** position. I bring more than three years of professional software engineering experience, a recently completed Master of Science in Computer Science from Pace University, and direct experience building Python automation pipelines, agentic workflows, test strategies, monitoring, and data-analysis tools for continuous software delivery. GM's vision of a world with zero crashes, zero emissions, and zero congestion makes the opportunity to improve autonomous-vehicle validation especially compelling.

At Sperse, I built AI-assisted and agentic workflows in Python, FastAPI, LangGraph, and LangChain that chain tools end-to-end across more than 40 specialized agents for over 10,000 users. I translated ambiguous stakeholder needs into production-ready internal tools and created OpenTelemetry trace-based validation pipelines that replay real production conversations across prompts and LLM versions, measure latency and tool-call accuracy, and detect safety regressions. I then integrated those automated checks, monitoring, and alerts into GitHub Actions CI/CD gates for continuous releases. This experience maps directly to authoring metrics and tests, converting validation strategies into production-quality automation, and ensuring trustworthy outputs at scale.

I have also used large language models to accelerate engineering analysis and communicate actionable results. By integrating OpenAI Codex with a custom Bitbucket MCP server, I automated analysis across 25–30 pull requests per week, generated review summaries, and saved engineers several hours. Earlier at Qualitest, I analyzed relational data with SQL window functions, materialized views, and indexes, delivered React visualizations for stakeholders, and improved monitoring and failure recovery across more than 100,000 weekly AWS Step Functions executions.

I would welcome the opportunity to bring this combination of Python, SQL, LLM workflows, automated testing, data visualization, and production monitoring to GM's Software Validation organization. I can be reached at +1 (945) 304-5781 or khanosaid726@gmail.com. Thank you for your time and consideration.

Sincerely,
Osaid Khan
